A mobile voice communication device including a wireless transceiver circuit for		
transmitting and receiving voice communications and for receiving data; a digital processor; and		
a memory storing application program code which when executed on the digital processor causes		
the mobile voice communication device to provide predetermined functionality to the user of the		
mobile voice communication device. The predetermined functionality includes basic features		
and it includes enhanced features that are in addition to the basic features. The application		
program code has a deactivated state in which the mobile voice communication device provides		
the basic features to the user without providing the enhanced features and an activated state in		
which the mobile voice communication device provides the enhanced features. Toggling		
between the deactivated and activated states is accomplished by receiving through the wireless		
transceiver circuit a transmitted key that was sent by a remote source to that mobile voice		
communication device.
